

During Deployment

10. Check yourself for ticks

When working outdoors, inspect your body for ticks. On the Robert Koch Institute (RKI) website, you can find information on what to do if you are bitten by a tick.

11. Use safe tools

Use only tools that you are familiar with and can handle safely. Check each tool before using it. Do not work with damaged tools. Loose shafts and similar issues can quickly become a danger for you and others.

12. Take care of your back

Lift with your knees. Carry heavy objects with others. Rather make more trips than carrying too much at once.

13. Pay attention to your hygiene

Wash your hands before drinking, eating or smoking, or during longer breaks. Wash your hands for at least 20 seconds with soap, or thoroughly disinfect your hands. Avoid contact with blood, urine or feces. Get wounds treated promptly.

14. Report damages and injuries

If you're injured during your deployment, seek medical attention. Document any damages suffered and note individuals who can attest to it. Please also report this directly to your group or the organization you signed up with.

15. Vaccination

Recommended vaccinations

- Booster for Diphtheria and Tetanus (recommended every ten years)
- Measles
- For individuals aged 60 and above: Influenza
- For individuals aged 60 and above: Pneumococcal infection
- For individuals aged 60 and above: Herpes Zoster (Shingles)

Vaccinations for high-risk groups

- FSME (Tick-borne encephalitis)
- Infection with Haemophilus influenzae Type b (Hib)
- Hepatitis A and B
- Influenza
- Meningococcal infection
- Pertussis (whooping cough)
- Pneumococcal infection
- Poliomyelitis (Polio)
- Rubella
- Varicella (Chickenpox)

Print- and folding information

Please note that depending on the printer, browser, and operating system, certain print settings may be necessary for the foldable format, such as printing front and back on one sheet of paper and possibly vertically mirroring the back.

15 Tips for Your Own Protection

Please consider these tips before and during disaster response operations

Information for helpers

Entwicklungsagentur
Rheinland-Pfalz e.V.

Before Deployment

You want to help? Then think about these things before your deployment:

1. Check your vaccination status

When helping, you come into contact with many people. You'll be at dirty places. The risk of infectious diseases is therefore specifically increased.

Check your vaccination records: Do you have all the recommended vaccinations from the STIKO (Standing Committee on Vaccination)? If you're not sure, consult your general practitioner beforehand.

Remember: When helping, you may come into contact with high-risk groups. Vaccinations for high-risk groups and their relatives can be especially important.

A tetanus vaccination is particularly crucial, as 2 out of 10 people with tetanus die from it. Tetanus, also known as lockjaw, can arise from even a small amount of dirt in a minor wound.

2. Take the right clothing and equipment with you

Important items include:

- Sturdy shoes, preferably safety shoes
- work gloves
- Simple respiratory mask/dust mask
- Protective helmet
- Sturdy, comfortable work clothing

3. Inform your family and friends beforehand

Tell or write them:

- When and for how long you'll be away?
- Where you're going?
- Who is accompanying you?

4. Take photos of identification documents

Leave IDs and other personal documents at home as they could get lost. Instead, take photos of all important papers beforehand. You can then show them when needed.

5. Packing list

- A **photo** of your ID card, health insurance card, driver's license (if available) and **vaccination certificate** on your phone 
- Your **smartphone**, a **charging cable**, a **plug adapter**, and a fully charged **power bank** 
- A **dust mask** 
- Plenty of **water** and enough **food** for the day (e.g., energy bars).
- Sun protection**, including a **hat**, **sunscreen**, and **sunglasses** 
- Protective clothing**, such as **work gloves**, a **high-visibility vest**, **safety goggles**, and **ear protection**
- Rain gear**
- Spare clothing**, including underwear for at least **two days**
- Important **medications** such as allergy medication
- Notebook** and **pens**
- Cash** and **debit card**
- Lightweight **backpack**

During Deployment

This way, you can protect yourself while helping:

6. Work in a team

Always work in teams of at least 3 people. Assistance efforts can be very exciting, often leading to not noticing one's own exhaustion. Therefore, pay attention to taking breaks. Also, watch out for signs of exhaustion in your partners. Drink regularly.

7. Work only in safe areas

Avoid working in places where you could fall. Do not enter buildings that could collapse. Watch out for objects such as branches or roof tiles that could fall. Avoid working near floodwater or mold. Keep a distance from emergency vehicles.

8. Never enter flooded areas and basements

Even if the water level is not high, you can quickly drown. Objects can be swept away by the water and injure you. Or you could receive a fatal electric shock, especially in flooded basements. Additionally, the water may press doors or windows shut, preventing you from getting out.

9. Be cautious around dangerous plants and dead animals

Do not touch hazardous plants like the giant hogweed (also known as giant cow parsnip). Exercise caution around plants with thorns as well. If you have an allergic reaction, seek medical help immediately. Do not touch dead animals. Dead animals should only be handled by professionals.
